Stress and Alcohol Cues Exert Conjoint Effects on Go and Stop Signal Responding in Male Problem Drinkers

Martin Zack, Tracy M Woodford, Anne M Tremblay, Lindsay Steinberg, Laurie A Zawertailo and Usoa E Busto

Neuropsychopharmacology (2011) **36**, 549; doi:10.1038/npp.2010.204; published online 17 November 2010

Correction to: *Neuropsychopharmacology* (2011) **36**, 445–458; doi:10.1038/npp.2010.177; published online 6 October 2010

In this article, the authors have identified an error on page 9, right column, in the last sentence of the third paragraph. The sentence should be as follows:

The relatively stronger correlation between SSRT to Alcohol words and ADS suggests that the severity of the dependence

syndrome—a dynamic variable—better predicts the debilitating effect of salient stimuli on inhibitory control than does a stable trait like Impulsivity, although alcohol dependence *per se* may also involve global inhibitory deficits on the SST (Lawrence *et al*, 2009).
