## Lightning Talk: Biopython (bio) Geography Module

Nicholas J. Matzke matzke@berkeley.edu Department of Integrative Biology University of California, Berkeley

**Abstract:** For Google Summer of Code 2009/NESCENT Phyloinformatics Summer of Code 2009, I built a Geography module for Biopython. The purpose of the module is to search, download, and process biogeographical data from GBIF, much as Biopython currently accesses Genbank. Application of the tool to a historical biogeography study on bivalves will be illustrated.

As required by Google Summer of Code and Biopython, the code is open access and is released under the Biopython License: http://www.biopython.org/DIST/LICENSE

The module is described, and a tutorial is presented, on the Biopython wiki: <a href="http://biopython.org/wiki/BioGeography">http://biopython.org/wiki/BioGeography</a>

The page contains links to the source hosted on Github; here is the direct link: <a href="http://github.com/nmatzke/biopython/tree/Geography">http://github.com/nmatzke/biopython/tree/Geography</a>
