

**CORRIGENDUM**

# Cystine addiction of triple-negative breast cancer associated with EMT augmented death signaling

X Tang, C-K Ding, J Wu, J Sjol, S Wardell, I Spasojevic, D George, DP McDonnell, DS Hsu, JT Chang and J-T Chi

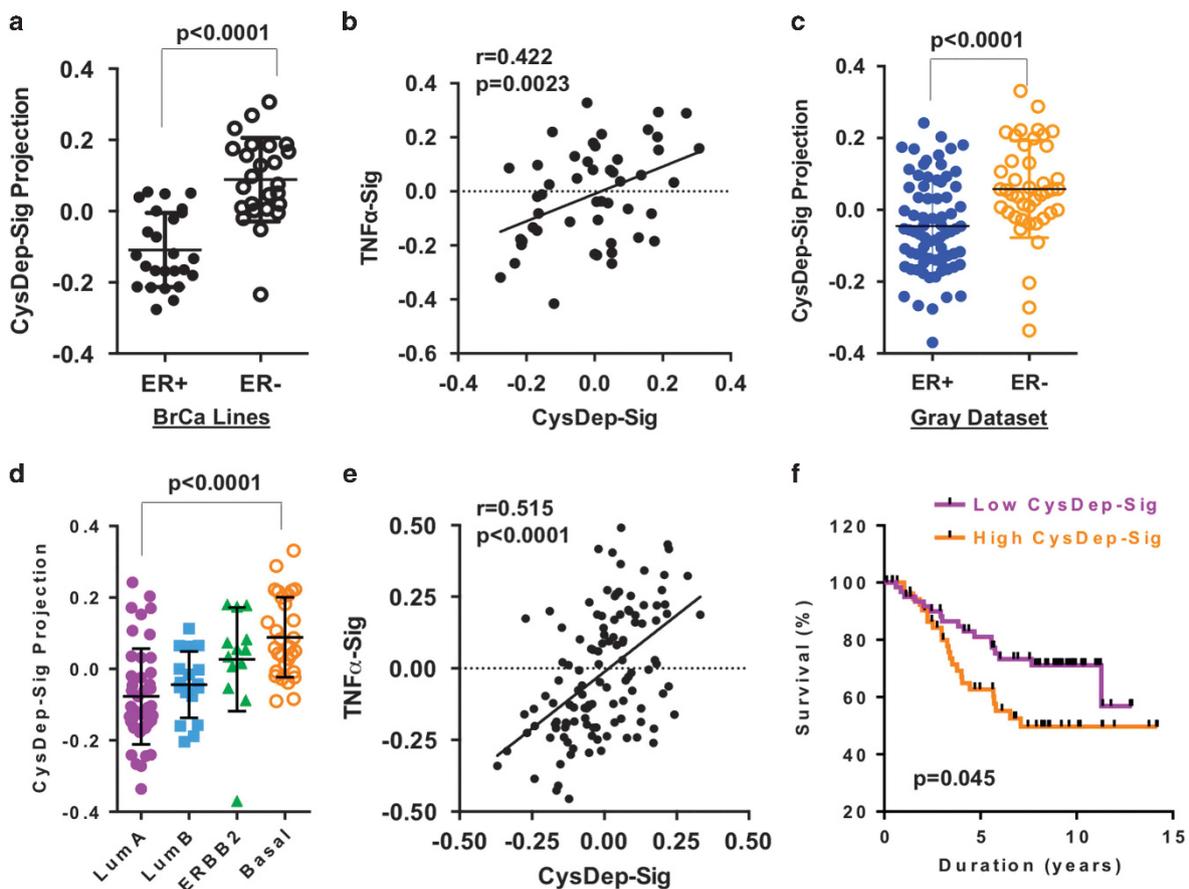

*Oncogene* (2017) 36, 4379; doi:10.1038/onc.2017.192; published online 12 June 2017

**Correction to:** *Oncogene* (2017) 36, 4235–4242; doi:10.1038/onc.2016.394; published online 21 November 2016

This correction has no effects on the results/conclusions of the paper.

Since the online publication of this article the authors noticed an incorrect version of Figure 4c was inadvertently included in Figure 4. Below is the corrected figure.

The authors would like to apologize for this error.

**Figure 4.** Enrichment and correlation of CysDep and TNF $\alpha$  gene signatures in breast tumors and cancer cell lines. **(a)** The activities of CysDep gene signature in a data set of breast cancer cell lines in relation to ER status. **(b)** The correlation of CysDep and TNF $\alpha$  gene signatures in a panel of breast cancer cell lines. **(c, d)** The activities of CysDep gene signature in a data set of breast cancer relative to ER status (c) or intrinsic subtypes (d). **(e)** The correlations of CysDep and TNF $\alpha$  gene signature in a panel of breast tumor data sets. **(f)** Kaplan-Meier survival curves of high and low CysDep-Sig breast tumors.<sup>32</sup>
