Support your infection control

Do you know where the Little Sister brand name comes from? The systems were originally used by ward sisters in hospital settings, acting to support them with infection control workflows. Now, our Little Sister systems offer unparalleled performance for professionals across a wide variety of sectors.

Our newest model, the Little Sister SES 3020B vacuum autoclave, is here to ensure your practice can cope with the demands of modern dentistry. Featuring fast cycles and a large 23 litre capacity chamber, the Little Sister SES 3020B allows you to process more instruments in each cycle. The system can also perform both 'B' and 'N' type cycles to meet your every need. Plus, we're proud to say that our Little Sister autoclaves are manufactured in the UK in the same business park that Eschmann was located in over 70 years ago.

When you need exceptional, efficient and reliable instrument sterilisation, you can't go wrong with a Little Sister.

For more information on the highly effective and affordable range of infection control products from Eschmann, visit www.eschmann.co.uk or call 01903 875787.

Increase range of motion

The OraStretch Press distributed by Total TMJ is the perfect solution for patients struggling with restricted range of motion in their jaw.

When used regularly, this device can improve your patients' range of jaw motion, nourish and strengthen their joint tissues, and reduce temporomandibular joint (TMJ) pain. This appliance has the ability to open 20% wider when compared to other jaw rehabilitation systems. In addition, the OraStretch press is small and light, and patients aren't required to spend additional money on replacement pads, as they are available free of charge.

The ability to provide your patients with a treatment option which is proven to prevent and treat trismus, along with a

range of temporomandibular issues will be incredibly reassuring, and could benefit your patients hugely.

For more details about Total TMJ and the products available, email info@totaltmj.co.uk.

Accuracy when it's needed the most

The Alminax Bite Registration material from Kemdent should be part of your dental practice's workflow. Here's why.

Incorrect and inaccurate bite registrations are a nightmare for you, your dental technician and ultimately your patients. To minimise the need for remakes, you need a material that you can depend on time and time again.

Reliable and dimensionally stable, the Alminax Bite Registration material absorbs heat and softens quickly, allowing you to take a precise bite registration. Its setting profile means that it stays robust once removed from the patient's mouth, for minimal distortion.

The Alminax Bite Registration is available in Alminax sheets, Wax Full Arch and Rite Bite. The Alminax Wax Full Arch and Rite Bite come in preformed U-shapes, saving you time as you don't have to manually bend them into shape.

For more information about Kemdent Acron HI, visit www.kemdent.co.uk/ or call 01793 770 256.
