

Effective case management

The British Endodontic Society (BES) encourages the promotion of endodontic treatment across the profession – welcoming specialists and generalists alike in its membership.

In order to assist clinicians in assessing the complexity of a case and, therefore, whether to carry out treatment themselves or refer to a more experienced colleague, the BES developed its Case Assessment Tool within the BES EndoApp. This is designed to help clinicians assess the risks and difficulties of individual cases. It takes into account a range of factors relevant to the complexity of the case to generate a score which suggests the best management route. This information helps clinicians decide whether to manage the case, or to refer.

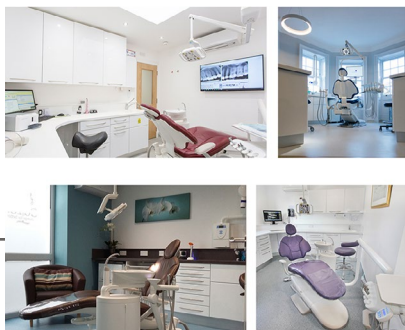

For more information about the BES, or to join visit www.britishendodonticsociety.org.uk or call 01494 581542.

Work with the experts for a bespoke service

Are you looking to renovate your surgery? Work with the experts!

Clark Dental has 49 years of experience working in the dental profession, supporting practices as they upgrade their dental surgeries. Their Dental Surgery Design Service offers clinicians bespoke 3D visualisation, allowing you to see your dream practice in stunning 3D render. This ensures that you always get exactly what you want, for total peace of mind.

Clark Dental goes the extra mile at every stage of your project, sharing their expertise and innovative ideas to help you build your perfect practice. For more information call Clark Dental on 01268 733 146, email info@clarkdental.co.uk or visit www.clarkdental.co.uk.

Celebrating 20 years of impact

This year marks a remarkable milestone for Bridge2Aid as the charity celebrates 20 years since its very first Dental Volunteer Programme in Tanzania.

To honour this achievement, they are launching the #20FOR20 campaign, and are inviting you to join them in creating a lasting legacy. By donating £20, supporters can help them raise £20,000 to kickstart the next 20 years of life-changing work!

Donations will make a profound difference by:

- Empowering the local dental workforce: supporting the training and up-skilling of local oral care providers, ensuring essential treatment reaches those in need
- Educating communities: training teachers and community health workers to spread vital oral health messages in schools and communities
- Expanding reach: enabling the expansion of programmes to create sustainable, community-led changes that will impact thousands of lives.

There are still a few spaces left for dentists and dental care professionals (DCPs) on the October outreach/training programme in the Mwanza region of Tanzania, running from 19 October to 2 November 2024.

This programme will focus on:

- Screening in primary schools
- Training and up-skilling local dental therapists
- Providing basic dental treatment
- Delivering oral health education
- Post-programme mentoring for dental therapists.

Volunteers are welcome to join for the full two-week programme or for a single week. Additionally, there are upcoming programmes focusing on Oral Health Education (OHE) in February, March and May 2025, as well as further outreach programmes in February and June 2025.
