

A truly comprehensive portfolio

Did you know... BioHorizons Camlog provides a truly comprehensive portfolio of clinically-evidenced dental implant systems, complementary biomaterials and educational resources?

Solutions are designed to optimise predictability, stability and longevity of clinical treatment, allowing dentists and their teams to care for a broad range of patients with different needs. The products also help to streamline workflows ensuring

an excellent patient and professional experience.

In addition, all solutions come with exceptional support from highly dedicated customer service and Territory Management teams who are always on hand to provide information and guidance.

For more information on the comprehensive product portfolio from BioHorizons Camlog visit <https://www.biohorizonscamlog.co.uk/en-gb/>.

Always on hand

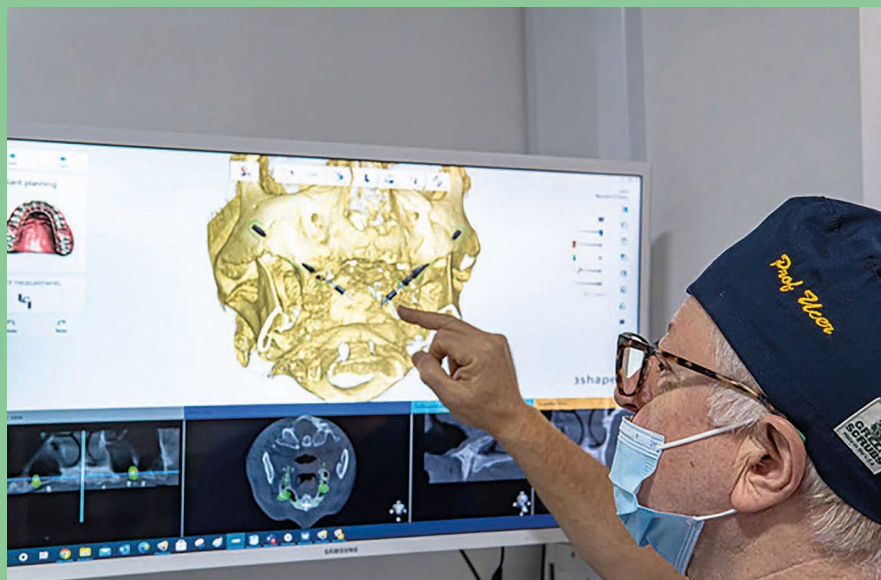

Under the leadership of eminent specialist oral surgeon, Professor Cemal Ucer, the Centre for Oral, Maxillofacial & Dental Implant Reconstructive Surgery can provide your patients with advanced care to meet all their complex clinical needs. The clinic can provide patients with reconstructive oral surgery, pre-prosthetic bone and tissue grafting, zygomatic or 3D printed custom-made titanium implants for the rehabilitation of severely atrophic jaws, and much more.

This advanced care comes with excellent communication and support. Friendly

teams are always on hand to answer questions from your patients by email or a direct phone call.

The support doesn't stop with patients. If you need a second opinion for treatment planning, an informed medicolegal opinion, or other advisory services and support, the clinic's friendly staff are there to help.

For more information visit www.ucer-clinic.dental or contact Professor Ucer at ucer@icedental.institute or Mel Hay at mel@mdic.co or 01612 371842.

For the final touches

Choose simplicity and effective results with the 3M Sof-Lex Finishing and Polishing solutions from Solventum, formerly 3M Health Care.

Clinicians can find support for their workflows with the 3M Sof-Lex Finishing and Polishing strips, which are designed to help prevent interproximal plaque build-up. You can choose between coarse/medium, coarse/medium (narrow), and fine/superfine grades to help you achieve the finish you need.

Employ these strips for upgraded ease of use when smoothing proximal surfaces, with each strip gapped at the centre for simple interproximal insertion.

Clinicians can also choose the 3M Sof-Lex Finishing and Polishing System Kit, which combines a colour-coded, sequential system of discs, strips and easy-to-use mandrels. The set contains a variety of choices, so you can progress with confidence in each treatment scenario.
