Identifying genetic risk factors for serious adverse drug reactions: current progress and challenges

Russell A. Wilke, Debbie W. Lin, Dan M. Roden, Paul B. Watkins, David Flockhart, Issam Zineh, Kathleen M. Giacomini & Ronald M. Krauss

Nature Reviews Drug Discovery **6**, 904–916 (2007) | doi:10.1038/nrd2423

Box 3 (page 913) indicated that the United States Drug Induced Liver Injury Network was only studying isoniazid, phenytoin and clavulanic acid/amoxicillin. This is not correct. The Network is studying drug-induced liver injury that is due to all drugs except acetaminophen.
